Modern food biotechnology, human health and development

Biotechnology (commonly abbreviated as biotech) is the broad area of biology involving living systems and organisms to develop or make products, or "any technological application that uses biological systems, living organisms, or derivatives thereof, to make or modify products or processes for specific use" (UN Convention on Biological Diversity, Art. 2).

Biotechnology - Wikipedia

A global catastrophic risk is a hypothetical future event which could damage human well-being on a global scale, even crippling or destroying modern civilization. An event that could cause human extinction or permanently and drastically curtail humanity's potential is known as an existential risk.. Potential global catastrophic risks include anthropogenic risks, caused by humans (technology ...

Certified Reference Materials (CRMs) Genetically modified crops have been commercially available since the mid-nineties. Due to opposing views on genetically modified crops, laws governing importation of these crops varies.

Certified Reference Materials (CRMs)

The dream of fending off old age is as old as human civilization. Given the global aging of the population, developing interventions that preserve health in old age and postpone the onset of age-related diseases is more important than ever.

Previous human studies revealed that L-theanine influences brain function. The current study was designed to evaluate the affect of L-theanine (Suntheanine®) on attention and reaction time response in 18 normal healthy University student volunteers. In accordance with preliminary analysis of the manifest anxiety scale (MAS), the subjects were divided into two groups referred to as high anxiety ...
