Characterization of fluoroelastomers by various analytical techniques including pyrolysis gas

chromatography/mass spectrometry

### **Characterization of fluoroelastomers by various analytical**

Liquid chromatography-mass spectrometry (LC-MS) is an analytical chemistry technique that combines the physical separation capabilities of liquid chromatography (or HPLC) with the mass analysis capabilities of mass spectrometry (MS). Coupled chromatography - MS systems are popular in chemical analysis because the individual capabilities of each technique are enhanced synergistically.

Infrared spectroscopy is a sensitive probe for the presence of bridging carbonyl ligands. For compounds with doubly bridging CO ligands, denoted  $\text{M}_2\text{-CO}$  or often just  $\text{M}_2\text{-CO}$ ,  $\text{M}_2\text{CO}$ ,  $\text{M}_2\text{CO}$  is usually shifted by  $100\text{--}200\text{ cm}^{-1}$  to lower energy compared to the signatures of terminal CO, i.e. in the region  $1800\text{ cm}^{-1}$ . Bands for face capping ( $\text{M}_3\text{CO}$ ) CO ligands appear at even lower energies.

1. SUMMARY 1.1 Identity, physical and chemical properties, and analytical methods . Bentonite is a rock formed of highly colloidal and plastic clays composed mainly of montmorillonite, a clay mineral of the smectite group, and is produced by in situ devitrification of volcanic ash. In addition to montmorillonite, bentonite may contain feldspar, cristobalite, and crystalline quartz.
